Table 1: Average treatment effects on production and sales outcomes

	(1)	(2)	(3)	(4)
Production (kg)	456.095 (402.966)	2.562 (12.713)	3.252 (14.993)	-7.899 (37.581)
Productivity (kg/acre)	432.256 (285.455)	6.790 (12.129)	-6.738 (15.252)	-73.029* (32.284)
Quantity sold (kg)	186.403 (293.029)	1.422 (6.395)	-0.020 (7.477)	-27.790 (21.198)
Revenue (UGX)	92301.764 (153046.468)	3964.096 (4401.098)	2568.418 (5246.834)	-23685.500+ (14180.210)
Production index	-0.055 (0.794)	0.019 (0.036)	-0.012 (0.045)	-0.252* (0.106)
Observations [†]		2,941	1,449	336

Note: Column (1) reports means at baseline (and standard deviations below); column (2) reports differences between treatment and control post-intervention; column (3) reports differences between treatment and control post-intervention for farmers who did not use complementary inputs and practices at baseline; column (4) reports differences between treatment and control post-intervention for farmers who did not use complementary inputs and practices at baseline and overestimate returns to improved varieties at baseline; **, *, and + denote significance at the 1, 5, and 10 percent levels; standard errors are clustered at the village level. [†]These are the numbers of observations in the regression with the index, regressions with individual outcomes have more observations.
